# Sorting Algorithms (<http://visualgo.net/sorting>)

**Bubble Sort:** 1) compare items next to each other and swap them if needed;  
2) repeat this process until the entire array is sorted.

## Insertion Sort:

- 1) remove item from array, insert it at the proper location in the sorted part by shifting other items;
- 2) repeat this process until the end of array is reach.

### Step 1

Assume first item is "sorted"

5	2	6	1	3	9
---	---	---	---	---	---

### Step 2

Identify the value to compare

5		6	1	3	9
---	--	---	---	---	---

2
---

### Step 3

Since  $5 > 2$ , shift 5 over to create space for 2 in the sorted section

	5	6	1	3	9
--	---	---	---	---	---

2
---

### Step 4

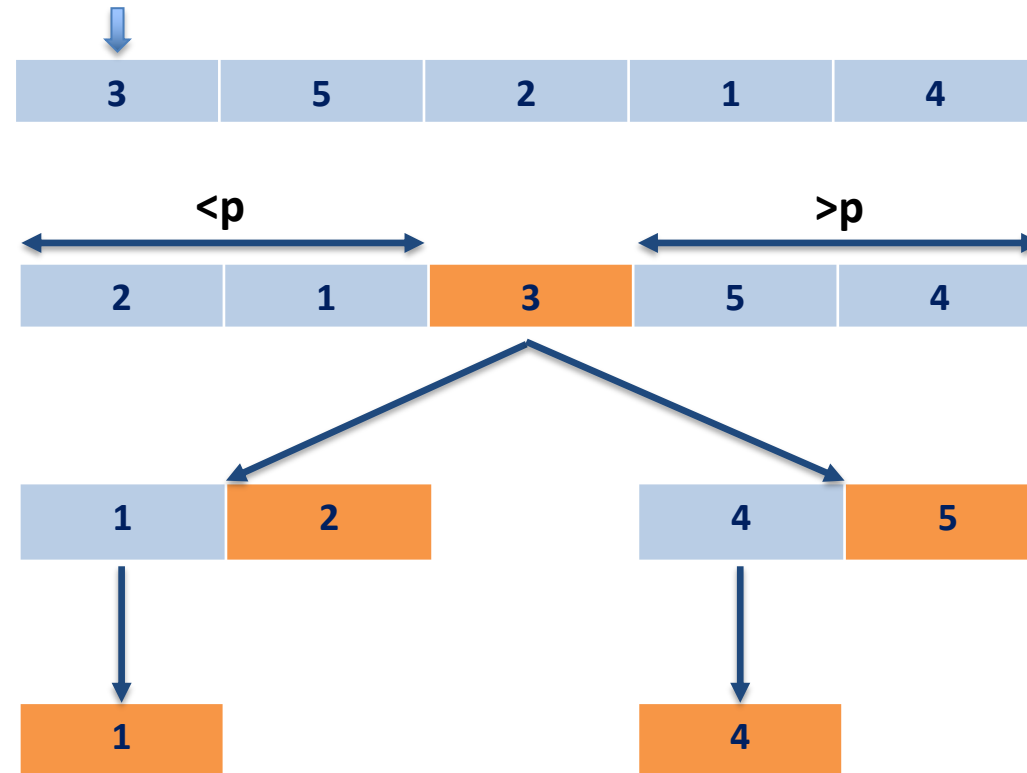

Insert 2 into the empty space in the sorted section

2	5	6	1	3	9
---	---	---	---	---	---

**Quick Sort:** also called divide-and-conquer

- 1) pick a pivot and partition array into 2 subarrays;
- 2) then sort subarrays using the same method.

**Pivot Element p**

**Sorted Array**

# Recursion

A **recursive function** is one that solves its task by **calling itself** on smaller pieces of data.

- Similar to recurrence function in mathematics.
- Like iteration -- can be used interchangeably; sometimes recursion results in a simpler solution
- Must have at least 1 **base case** (terminal case) that ends the recursive process

Example: Running sum (  $\sum_1^n i$  )

## Mathematical Definition:

RunningSum(1) = 1

RunningSum(n) =  
n + RunningSum(n-1)

## Recursive Function:

```
int RunningSum(int n) {  
    if (n == 1)  
        return 1;  
    else  
        return n + RunningSum(n-1);  
}
```

# Recursive Fibonacci

0, 1, 1, 2, 3, 5, 8, 13, 21, 34, 55, 89, 144, ...

$$\begin{cases} F_n = F_{n-1} + F_{n-2} \\ F_0 = 0 \\ F_1 = 1 \end{cases}$$

```
int Fibonacci(int n){ /* assume n is non-negative */
```

```
}
```

# Recursive Fibonacci with Look-up Table

```
int table[100];  
/* assume each element will be initialized to -1 in main */  
  
int fibonacci(int n){ /* assume 0<=n<100 */  
    /* if fibonacci(n) has been calculated, return it */  
  
    /* otherwise, perform the calculation, save it to table  
       and then return it */  
  
}
```
